Pearsons's r = 0.73, p < 0.001, n = 463

Superpathway of aromatic amino acid biosynthesis
L−ornithine biosynthesis i
L−arginine biosynthesis i (via l−ornithine)
L−arginine biosynthesis ii (acetyl cycle)
Chorismate biosynthesis i
Udp−n−acetylmuramoyl−pentapeptide biosynthesis ii (lysine−containing)
Β−(1,4)−mannan degradation
Superpathway of l−tryptophan biosynthesis
Glycogen biosynthesis i (from adp−d−glucose)
Fatty acid biosynthesis initiation (mitochondria)
L−glutamate and l−glutamine biosynthesis
Methylerythritol phospha pathway i
O−antigen building blocks biosynthesis (e. coli)
Sucrose biosynthesis ii
Isoprene biosynthesis i
L−histidine biosynthesis
Trna charging
Chorismate biosynthesis from 3−dehydroquinate
Glycogen degradation ii
Ump biosynthesis iii
Methanogenesis from acetate
Superpathway of l−cysteine biosynthesis (mammalian)
Queuosine biosynthesis i (de novo)
L−lysine biosynthesis vi
Ump biosynthesis ii
Ump biosynthesis i
Guanosine ribonucleotides de novo biosynthesis
Glycolysis iv
Succinate fermentation to butanoate
Fatty acid β−oxidation vi (mammalian peroxisome)
Ethanolamine utilization
D−galactarate degradation i
Superpathway of fermentation (chlamydomonas reinhardtii)
D−glucarate degradation i
Acetylene degradation (anaerobic)
Glycolysis ii (from fructose 6−phosphate)
Superpathway of methylglyoxal degradation
5'−deoxyadenosine degradation ii
Glycolysis i (from glucose 6−phosphate)
Superpathway of n−acetylneuraminate degradation

Mean pathway abundance
0.000 0.003 0.006 0.009 0.012

Relative abundance difference
(Cluster 1 − Cluster 2 bacteria)
